SIZING NOTES:

- Use a tailor's tape measure in inches to calculate circumference.
- Start from the center of your forehead; thumbs width above your eyebrows.
- Take full 360° measurement, making sure the tailor's tape measure does not drift up or down into the smaller sections of your head.
- Keep the tape measure in a straight line and record the measurement at the largest part of your head.
- Measure 3x to make sure this is accurate and comfortable to you.
- Tape measure should lay comfortably around your head. Do not hold loose or synch tight.

DISCLAIMER:

CME is done independently through InEarzSports.
